

Frog IT Solutions

Bespoke software. Built around your operation.

Software engineering for rail, industry and laboratories.

EXPERIENCE THAT TRANSLATES COMPLEXITY

From railway control rooms to laboratory workflows and industrial test systems.

Your operation comes first.

We do not sell off-the-shelf software. We build bespoke solutions around your specific needs, requirements and processes.

2002

IN BUSINESS SINCE

20+

YEARS IN BUSINESS

~10

YEARS, SIEMENS PROJECT*

01 Industrial Automation

Connect equipment and software. Hardware integration and purpose-built test applications bring physical processes into the digital workflow.

Hardware integration / Test systems

02 Bespoke Enterprise Software

Windows and web applications designed around how your team works, with database integration, reporting and document automation.

Business applications / Data integration

03 Mission-Critical Systems

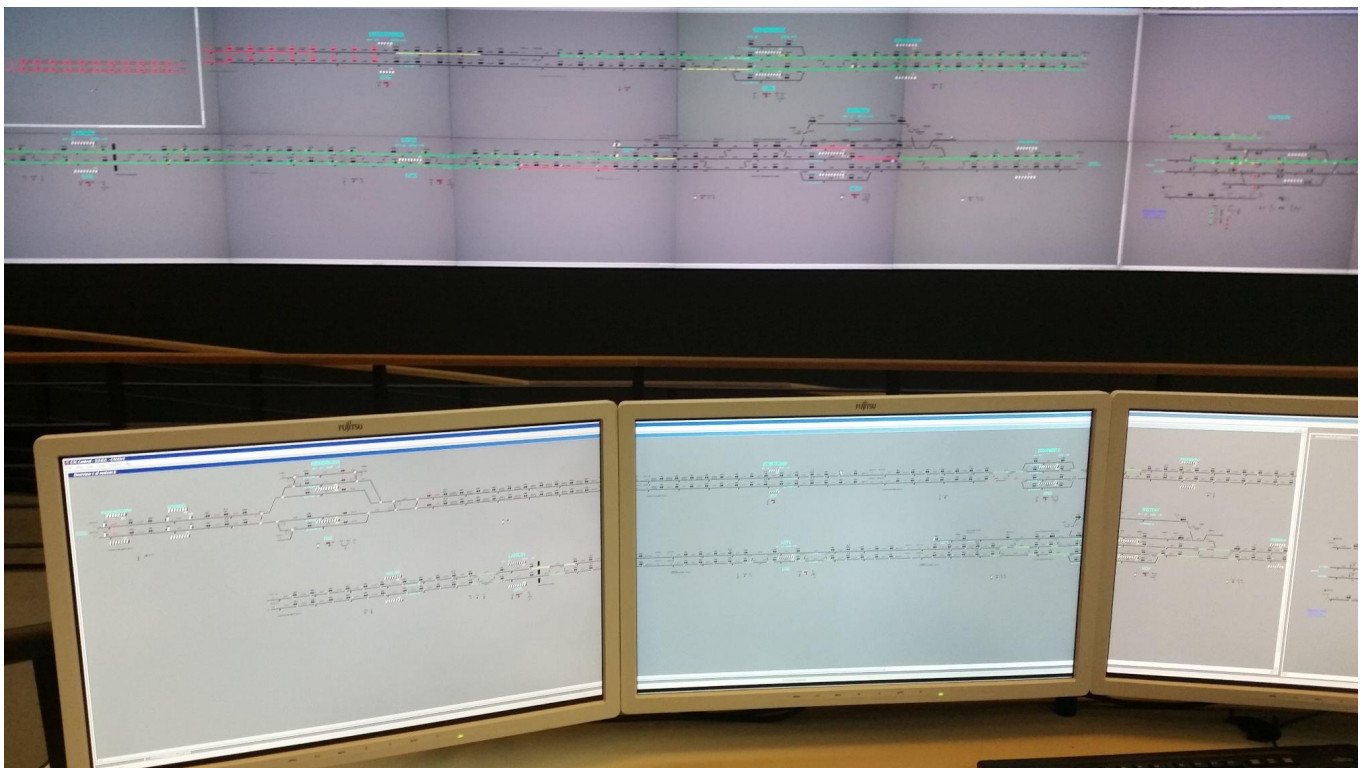

Experience in complex railway-control and laboratory systems, where the software must make demanding processes usable.

Railway control / Infinity LIMS

*"The best part of 10 years" — AB – Siemens, in the supplied client testimonial.

Complex systems. Clear operational control.

Our railway portfolio includes work for Siemens Mobility, alongside train-control software and railway monitoring applications.

Project spotlight: installed train-control environment.

THE WORK

Translate complex concepts and processes into software that meets operational requirements.

THE CLIENT'S VIEW

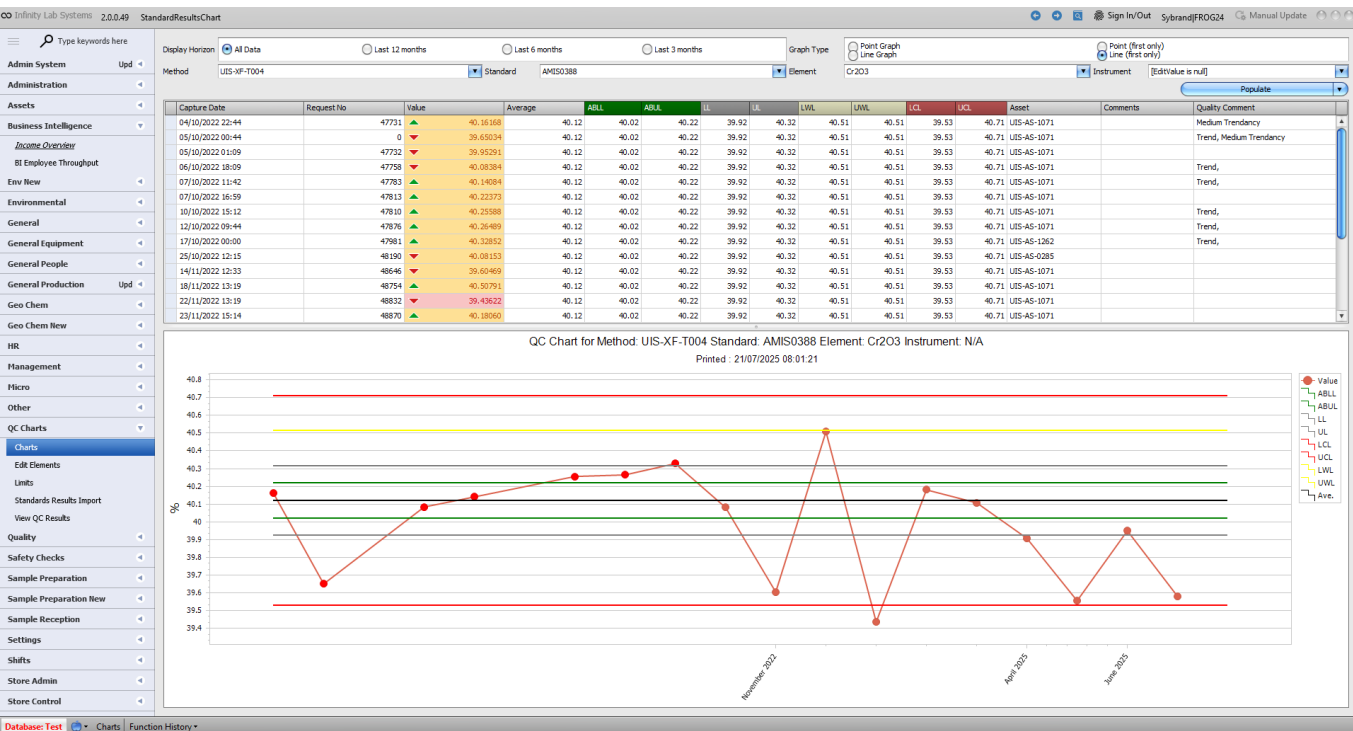

A team-led project that helped Siemens achieve its goals and reach its targets.

"He led his team with distinction and that enabled us to achieve our goals and reach our targets."

AB – SIEMENS / TESTIMONIAL EXCERPT

Infinity LIMS. Built for laboratory workflows.

Laboratory information management software spanning results, quality-control charts, supplier orders and business information.

Infinity LIMS: results records and quality-control chart.

OPERATIONAL VISIBILITY

Results and quality-control information presented together in one application.

CLIENT PORTFOLIO

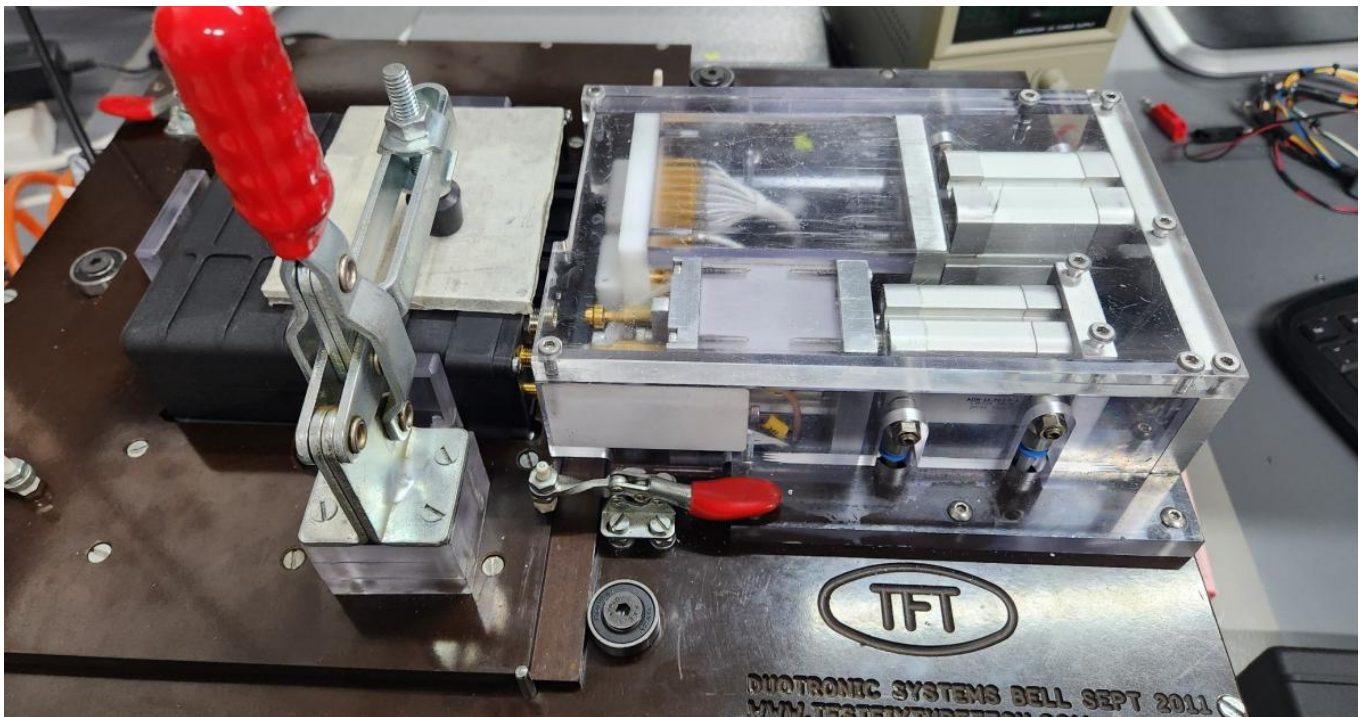

Laboratory clients include UIS Analytical Services.

CONNECTED WORKFLOWS

Examples include supplier ordering, laboratory administration and income overview.

Where hardware meets software.

Purpose-built applications connect equipment to the information needed to run and understand industrial processes.

Duotronic: industrial test fixture and hardware integration.

Hardware integration

Software designed to communicate with physical equipment.

Test applications

Duotronic TEQ software supports test configuration and execution.

Data connectivity

Cross-database integration connects information across existing systems.

A bespoke approach allows the application to follow the equipment and process—not force the operation into a generic product.

Software shaped around the way your business works.

Beyond rail and laboratories: bespoke applications for manufacturing workflows, document production and reporting.

Manufacturing web application: parts and component management.

Manufacturing workflows

Applications covering parts, suppliers, stock and manufacturing workflows.

Documents & reporting

Template-based document merging, product sheets and generated report outputs.

TECHNICAL FOUNDATION

Windows & web • .NET • SQL databases • Hardware & cross-database integration

CLIENT PERSPECTIVES

Trust earned through delivery.

COMPLEXITY, LEADERSHIP & LONG-TERM COLLABORATION

“We have been working with Sybrand and his team for the best part of 10 years on an extremely complex project, with various dimensions. He has the ability to translate extremely complex concepts and processes into software programs that fulfill our requirements. He led his team with distinction and that enabled us to achieve our goals and reach our targets.”

AB – SIEMENS

BUSINESS UNDERSTANDING & BETTER SOFTWARE

“But he also made it his business to really understand our business and processes in depth, and thus added insight and suggestions that improved the new software significantly.”

SP – LABORATORY
